EUDR Compliance Statement & Commitment

Our company is fully committed to environmental sustainability and strictly complies with the European Union Deforestation Regulation (EUDR) - Regulation (EU) 2023/1115. We ensure that all in-scope commodities and products entering or exiting the EU market fulfill the following strict criteria:

- **Deforestation-Free Sourcing:** We verify that our products are produced on land that has not been subject to deforestation or forest degradation after December 31, 2020.

- **Legality of Production:** All items are produced and harvested in strict accordance with the relevant local legislation of the country of production, including land use rights, environmental protections, third-party rights, labor laws, and human rights.

- **Rigorous Due Diligence:** We implement and maintain a comprehensive due diligence system (DDS) that includes data collection (geolocation coordinates of production plots), risk assessment, and risk mitigation measures to ensure a "negligible risk" of non-compliance.

- **Traceability and Transparency:** We provide required due diligence reference numbers and compliance data throughout the supply chain to competent EU authorities, business partners, and customers.

- **Document Retention:** All records, due diligence statements, and relevant compliance documentation are securely archived and retained for a minimum of 5 years.
